

Geospatial Data Analysis

Workora Labs – Data Analytics Internship

1. Objective

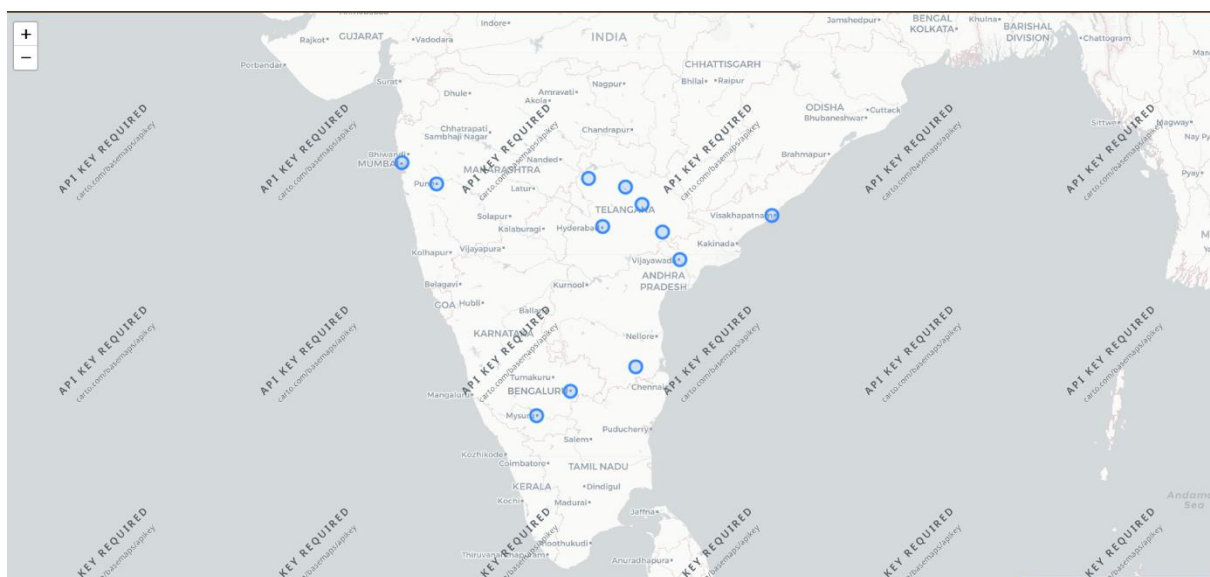

The objective of this analysis is to visualize regional sales data and identify potentially underserved geographic markets based on revenue and user demand.

2. Dataset

The dataset contains regional information including State, City, Postal Code, Revenue, Users, Latitude and Longitude. The dataset was created for analysis because no sample database was provided for this task.

3. Geographic Visualization

Geographic Distribution of Revenue and Users

4. Regional Analysis

Region	Users	Revenue	Assessment
Warangal	210	₹320,000	Potentially underserved
Karimnagar	190	₹280,000	Potentially underserved
Khammam	175	₹260,000	Potentially underserved

5. Key Findings

- Hyderabad, Bengaluru and Mumbai have relatively high user counts and revenue.
- Warangal, Karimnagar and Khammam have moderate user demand with comparatively lower revenue.
- Warangal, Karimnagar and Khammam are identified as potentially underserved regions based on the sample metrics.
- The geographic map shows the distribution of the selected cities and their regional performance.
- Revenue and user counts can be used to identify areas that may require further market investigation.

6. Conclusion

The geospatial analysis provides a visual understanding of regional revenue and user distribution. Based on the sample dataset, Warangal, Karimnagar and Khammam were

identified as potentially underserved regions for further investigation. These findings are based on the illustrative dataset created for this internship task and should not be treated as actual market measurements.
